

Nebula Role Permission Page

UI Prototype — Usability Test Guide

ABOUT THIS TEST

Test Overview

Nebula admins can assign Org / Site role permissions using default presets (Full, Read, etc.). A new **Custom Role Permission** feature is being developed to address requests for finer-grained control. This session tests that feature.

Before you begin

- There is no right or wrong answer — configure based on your understanding.
- Start screen recording **before** opening the prototype; stop only after the entire test — recording must include audio.
- Narrate your reasoning as you make each selection.
- If you can't find a feature, navigate naturally and **speak your thoughts aloud**.

SETUP

Test Preparation

01 | Prepare a computer that can **record screen + audio**. Confirm your microphone is enabled before starting.

Windows

1. Go to **Settings > Privacy (& Security) > Microphone**. Confirm access is **On** and **Xbox Game Bar** has permission.
2. Press **Win + G** to open Xbox Game Bar.
3. Gear icon > **Capturing** > confirm **Record microphone audio** is checked.
4. Press **Win + Alt + R** to start. Timer + mic indicator appears top-right.
5. Press **Win + Alt + R** again to stop. Saved to **Videos > Captures**.

Mac

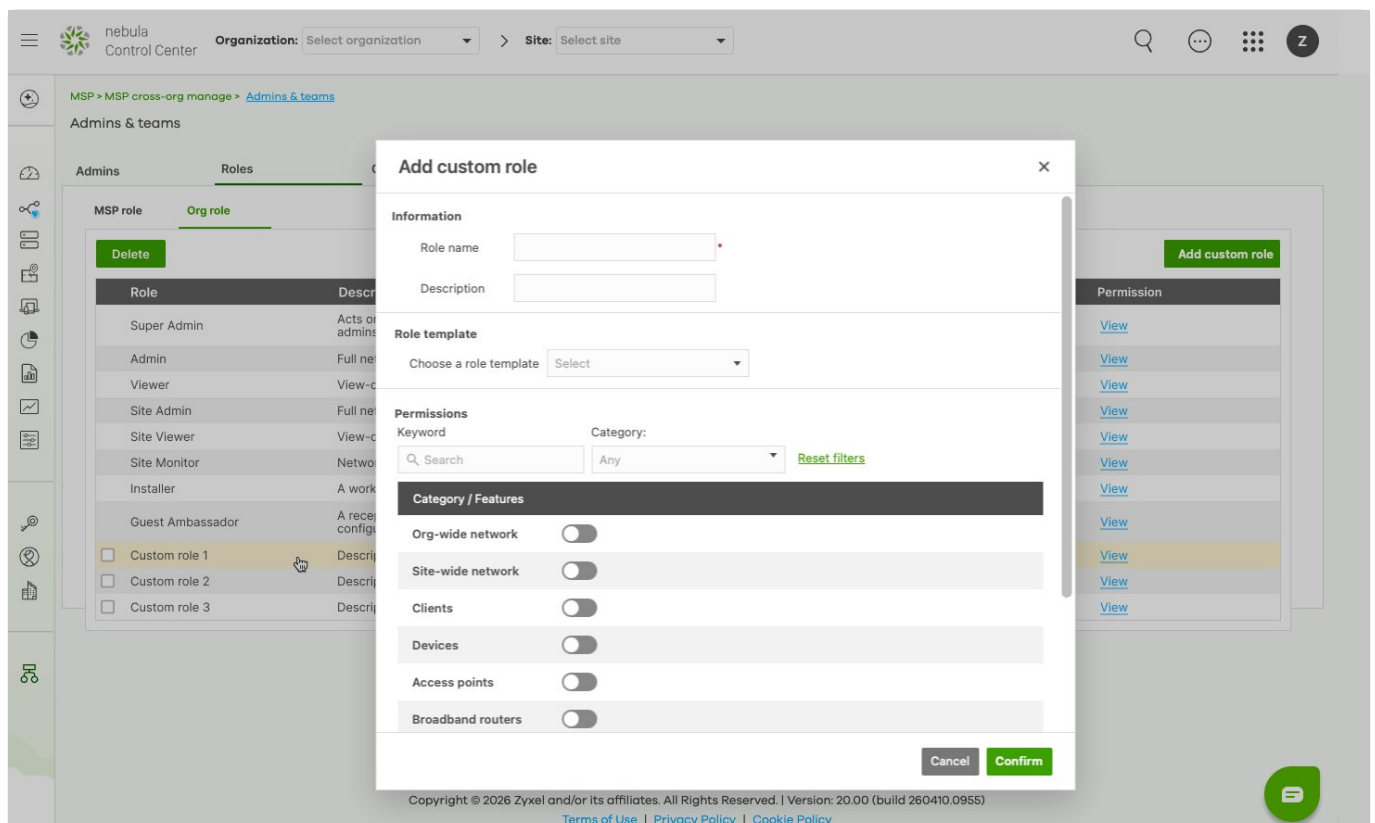

1. Press **Command + Shift + 5** to open the Screenshot toolbar.
2. Select **Record Entire Screen** or **Record Selected Portion**.
3. **Options > Microphone** — choose your input. **Defaults to None; must select manually or no audio is recorded.**
4. Click **Record** to start.
5. Press **Command + Control + Esc** to stop. Saved to **Desktop**.

02 | Download [Custom role prototype](#) (open the link and click Download). Open the downloaded file directly in your browser. No NCC login needed. Header, side menu and nav are decorative — outside the test scope.

TASKS

Tasks

Click **Add custom role** (top-right of the Roles page) to open the main test screen. The screen should look like the screenshot below.

1

Without using keyword search, set up a role that can generate a PDF from Topology for a customer.

When finished — click Save and keep the CSV file.

2 Set up a role with Tier 1 Support permissions.

When finished — click Save and keep the CSV file.

Tier 1 Support

- View Site-wide Dashboard and device pages to assess device status.
- Use **Live tools** to troubleshoot remotely — Reboot, reset Switch PoE, or run Firmware upgrade.
- View-only access to device config (Firewall Interface, Port & Interface, Policy route). **No modify.**

3 Use a role template to create a WiFi Admin role and adjust permissions as needed. Switch config must not be included.

When finished — click Save and keep the CSV file.

WiFi Admin

- Full AP management: SSID, radio planning, AP & port settings, traffic, guest security.
- Monitor wireless health, roaming, client connections, usage reports and guest access (voucher).
- View and manage site Topology, device map / floor plan, site dashboard.
- Run diagnostics and firmware upgrades. **Switch config excluded.**

SUBMIT

Recording & File Submission

- After each **Save**, the prototype downloads **custom-role-permissions-YYYYMMDD-HHMMSS.csv**.
- Submit all **CSV files** (at least 3) **and** your screen recording video together via the form below.

[Nebula Role Permission Page — Usability Questionnaire](https://forms.cloud.microsoft/r/J3euX7z3BT)

<https://forms.cloud.microsoft/r/J3euX7z3BT>

Please complete the questionnaire AND upload your CSV files and screen recording video.

Thank you for your participation. Your feedback directly shapes the Role Permission specification and final UI design.
